Enterprise Generative AI & Model Deployment Policy

Document ID: GOV-AI-2026-01 | **Owner:** AI Governance Council | **Date:** 19 January 2026

Approved Model Services

Employees may only use corporate-sanctioned generative AI gateways configured with zero-data-retention agreements. Public consumer generative AI tools are strictly prohibited for corporate data.

Customer & Proprietary Data

Submitting source code, proprietary algorithms, or non-anonymized customer personal identifiable information (PII) to non-isolated external LLM endpoints constitutes a security violation.

Code Review Mandate

All software code generated or augmented by LLM tools must undergo standard peer code review, static code analysis (SAST), and unit test validation prior to merging to main.

Model Hallucination & Risk Mitigation

AI-assisted outputs utilized in regulatory submissions, financial forecasts, or HR hiring decisions must include deterministic verification and sign-off by a designated human subject matter expert.
