Data Classification & Handling Standard

Document ID: POL-SEC-2026-01 | **Owner:** Information Security & Compliance | **Date:** 15 January 2026

Policy Overview

This document defines organizational data classification tiers to ensure appropriate operational and cryptographic controls across cloud and on-premises environments.

Classification Tiers

Data is categorized into four distinct levels: Public (open distribution), Internal (staff access by default), Confidential (restricted access requiring role-based authorization), and Restricted (strictly segmented data including PII, credentials, and cryptographic keys).

Encryption Standards

Data at rest classified as Confidential or Restricted must use AES-256 encryption. Data in transit requires TLS 1.3 across all perimeter and inter-service boundaries.

Retention & Disposal

Restricted customer telemetry must be purged after 90 days unless subject to legal hold. Decommissioned physical media requires cryptographic erasure and certified degaussing.
