Disaster Recovery & Business Continuity Framework

Document ID: BCP-SRE-2026-05 | **Owner:** Infrastructure Reliability Directorate | **Date:** 24 February 2026

Target RTO and RPO

Tier 0 Critical Services (Authentication, Core Database) mandate a Recovery Point Objective (RPO) of <= 5 minutes and Recovery Time Objective (RTO) of <= 30 minutes.

Multi-Region Strategy

Production databases operate cross-region asynchronous active-passive replication with automated failover triggers evaluated by synthetic heartbeat monitors.

Backup Frequency & Immutable Vaults

Full database snapshots are generated every 24 hours, with transaction log archiving every 15 minutes. Backups are stored in WORM-compliant immutable object storage across secondary availability zones.

Annual DR Drills

Live cross-region DR game days are executed bi-annually. The simulation involves simulated primary region isolation and must pass without data loss or SLA breach.
